Respiratory System Modern Biology Study Guide

In organisms with a closed circulatory system, the blood does not fill body cavities. Many vertebrates, such as humans, have a circulatory system known as the cardiovascular system and a secondary system known as the lymphatic system.. Animals with a closed circulatory system tend to be larger than those with an open circulatory system—consider, for example, an elephant versus a grasshopper.

Open vs. Closed Circulatory System | Biology Dictionary

Just invest little grow old to retrieve this on-line publication circulatory system modern biology study guide answer as skillfully as review them wherever you are now. circulatory system modern biology study The human circulatory system functions to transport blood and oxygen from the lungs to the various tissues of the body.
