6.002 is designed to serve as a first course in an undergraduate electrical engineering (EE), or electrical engineering and computer science (EECS) curriculum. At MIT, 6.002 is in the core of department subjects required for all undergraduates in EECS. The course introduces the fundamentals of the lumped circuit abstraction.

Circuits and Electronics | Electrical Engineering and ...

6.002 (Circuits and Electronics) introduces the fundamentals of the lumped circuit abstraction. Topics covered include: resistive elements and networks; independent and dependent sources; switches and MOS transistors; digital abstraction; amplifiers; energy storage elements; dynamics of first- and second-order networks; design in the time and frequency domains; and analog and digital circuits and applications.

3) FET circuit solutions I Determine the drain current, ID, and drain-source voltage, VDS, for the following circuits and specifications Q2 R2 200 0 Vcc R3 50 In this design, the gate and drain are connected by a short circuit which gives VGS = VDS. The FET cannot be in the Triode region since VDS is always greater than (VGS-Vth). If the FET ...
