I was writing this program for fun and I am now more interested in finding a good resource for learning about how to solve combinatorial problems in programming. Everything I have found for learning combinatorics tells me how to find to number of possible combinations and is useless for actually enumerating all the possible combinations.

Lattice paths are often used to count other combinatorial objects. Similarly, there are many combinatorial objects that count the number of lattice paths of a certain kind. This occurs when the lattice paths are in bijection with the object in question.
