~~Abnormal Linguistic Lateralization and Sensory Processing ...~~

The lateralization of brain function is the tendency for some neural functions or cognitive processes to be specialized to one side of the brain or the other. The medial longitudinal fissure separates the human brain into two distinct cerebral hemispheres,

Access Free Abnormal Brain Lateralization In High

connected by the corpus callosum.

Although the macrostructure of the two hemispheres appears to be almost identical, different composition of neuronal networks allows for specialized function that is different in each hemisphere. Lateralization

~~Lateralization of brain function - Wikipedia~~

Access Free Abnormal Brain Lateralization In High

Lateralization of brain structure and function occurs in typical development, and abnormal lateralization is present in various neuropsychiatric disorders. Autism is characterized by a lack of left lateralization in structure and function of regions involved ...

approach.

~~Frontiers | Brain lateralization and self-
reported ...~~

The abnormal broadband EEG asymmetry
in autism may point to a diminished

Access Free Abnormal Brain Lateralization In High

capacity of right temporal cortex to generate EEG rhythms. The concurrent lack of normal leftward asymmetry of mu rhythm suggests that abnormalities in EEG lateralization in autism may be regionally/functionally specific.

~~Abnormal EEG lateralization in boys with~~

Access Free Abnormal Brain Lateralization In High Functioning Autism

autism ...

Autism is characterized by a lack of left lateralization in structure and function of regions involved in language, such as Broca and Wernicke areas. Using functional connectivity magnetic resonance imaging from a large publicly available sample ($n = 964$), we tested whether abnormal functional

Access Free Abnormal Brain Lateralization In High

Functioning Autism
lateralization in autism exists preferentially in language regions or in a more diffuse pattern across networks of lateralized brain regions. The autism group exhibited significantly reduced left ...

~~Abnormal lateralization of functional connectivity between ...~~

Access Free Abnormal Brain Lateralization In High

Several contributions have reported reduced brain lateralization in schizophrenia, causing a failure of left hemisphere dominance.

Evidence of altered connectivity among distinct cortical areas is also accumulating.

The aim of the present article is to critically review such contributions.
