Relations And Functions

Write an equation of the line that passes through (8, 2) and is perpendicular to the line whose equation is y# !x$ 3. The slope of the given line is #. Since the slopes of perpendicular lines are negative reciprocals, the

slope of the perpendicular line is 2. Use the slope and the given point to write the equation.

2-42-4 Study Guide and Intervention - ALGEBRA 2

To find the value of y, substitute 2 for x in the first equation.

$y = -3(2) + 4 = -6$

+ 4 = – 2.

Therefore, the solution of the given system of equations is x = 2, y = – 2. Check this solution by substituting the values into the second equation and making sure the resulting equality is true. 2. A.
