Algebra is just like a puzzle where we start with something like "$x - 2 = 4$" and we want to end up with something like "$x = 6$". But instead of saying "obviously x=6", use this neat step-by-step approach: Work out what to remove to get "$x = ...$" Remove it by doing the opposite (adding is the opposite of subtracting) Do that to both sides

Algebra & Geometry | Taylor & Francis Group
Many people think there is only one "right" way to teach geometry. For two millennia, the "right" way was Euclid's way, and it is still good in many respects. But in the 1950s the cry "Down with triangles!" was heard in France and new geometry books appeared, packed with linear algebra butwithnodiagrams.

An Introduction to Differentiable Manifolds and Riemannian ...
The Greeks created a geometric algebra where terms were represented by sides of geometric objects, usually lines, that had letters associated with them, and with this new form of algebra they were able to find solutions to equations by using a process that they invented, known as "the application of areas". "

Algebra has a reputation for being difficult, but Math

Games makes struggling with it a thing of the past. Kids can use our free, exciting games to play and compete with their friends as they progress in this subject! Algebra concepts that pupils can work on here include: Solving and writing variable equations to find answers to real-world problems

Algebra - Practice with Math Games
Familiarity with graduate level mathematics in topics such as numerical linear algebra, optimization, or algebraic geometry. Description: Many models in the sciences and engineering can be described by non-linear polynomial equations. This course offers an introduction to both theoretical and computational methods for working with such models.

Math 275: Introduction to Non-Linear Algebra
Introduction to Algebra This online math course integrates mathematics, specifically algebra with many other areas of study, including history, biology, and geography. You will develop a rich understanding of math while you study algebra right here in a relaxed and supportive learning environment.

Introduction to Algebra
This course is an introduction to the modern abstract theory of groups and rings. Groups are abstractions connected with the concept of symmetry, and rings are "abstract number systems" in which there are versions of the arithmetic operations: addition,

subtraction, multiplication, and (sometimes) division.
