Ladder Logic is one of the most common PLC programming languages. The standards of the language are well documented by the International Electromechanical Commission (IEC) in the exhibit 61131-3. However, official documentation of the ladder logic symbols isn ' t easy to digest and doesn ' t provide concrete examples of each one.

Hi, 1st: you must know that Rslogix is not a PLC. RSLogix is a software required to program a Allen Bradley PLC. The difference is: RSLOGIX500 is to program small PLCs like Microllogix1100,SLC500, while RSLOGIX 5000 is to program the smallest PLCs.I advice you to start with SLC500, but remember that the secret to program well any PLC you must undersrtand the structure of that PLC,otherwise it ...

Since ladder logic is a graphical programming language, the PLC programs written in ladder logic are a combination of ladder logic symbols. All the symbols can be found in the standard defining ladder diagram programming: IEC 61131-3. But, those standards are quite expensive if you are just looking for the symbols used in ladder diagrams.

In its elementary form, PLC logic is very similar to the hard-wired logic you would find in an electrical ladder diagram. For example, if you wanted to turn on a light with a momentary pushbutton, you would wire it like the circuit below. When you press PB1, the pilot light PL1 lights up.

Write ladder logic Writing ladder logic requires that you choose the input and output instructions, and choose the tag names for operands. Identify the conditions to check and separate them from the action to take for the rung. Choose the appropriate input instruction for each condition and the appropriate output instruction for each action.
