CURAMINE aliphatic amine based epoxy-curing agents comprise of unmodified and modified grades. Unmodified grades are essentially multi-functional amines consisting of primary, secondary and tertiary amine groups linked via ethylene units. Unmodified grades are low in viscosity, have low usage rates and are generally very reactive.

Curamine—Bitz-Polymers-and-Chemicals
Versamid®curing agents include reactive polyamide resins, amidoamines and modified amines designed for use with solid or liquid epoxy resins to provide tough, chemical-resistant, thermoset coating applications that cure at room temperature. These materials also find use in adhesive applications.

Epikure™ Curing Agent 580 by Hexion is a light color, lower viscosity, modified cycloaliphatic amine curing agent. It offers enhanced yellowing resistance, tack-free surfaces and excellent mechanical properties. It improves sustainability because it does not contain intentionally-added benzyl alcohol or nonylphenol.

Epikure™-Curing-Agent-580—Hexion—datasheet
Aradur® 33641 by Huntsman is a BzOH-free hardener. It is a formulated fast cure amine. Exhibits good surface properties without sensitivity to atmospheric humidity.

Historically, aromatic amine curing agents, specifically those based on methylene- dianiline (MDA), were used in epoxy formulations to achieve excellent resistance to solvents, mineral acids and organic acids. However, regulation of aromatic amines, such as MDA, has prompted formulators to consider alternative curing agents.
