Anes Feeling Thermometers
feeling thermometer. You can choose any number between 0 and 100. The higher the number, the warmer or more favorable you feel toward that person, the lower the number, the colder or less favorable. You would rate this person at the 50-degree mark if you feel neither warm nor cold toward them. If we come to a person whose name you don't

ANES - Feeling Thermometers
(ANES), "feeling thermometers" have become standard tools in sur-vey-based political research. Respondents use feeling thermometers to locate attitude objects on an imaginary scale ranging from 0 (very cold) to 100 (very warm). There is mounting evidence that people respond to political objects in consistently positive or consistently negative ways

Anes Feeling Thermometers - fa.quist.ca
A feeling thermometer, or a thermometer scale, is a procedure used in survey research to measure feeling. Respondents are given instructions to express their feelings in numbers using the thermometer for temperatures as a reference or an analogy. Positive feelings are labelled as warm feelings and negative feelings are equivalent to cold feelings.

Anes Feeling Thermometers - logisticsweek.com
Feeling thermometers enable respondents to express their attitudes about a person, group, or issue by applying a numeric rating of their feelings toward that person, group, or issue to an imaginary scale. Using a feeling thermometer, respondents express their feelings in terms of degrees, with their attitudes corresponding to temperatures.

Feeling Thermometer - SAGE Research Methods
The ANES Bibliography includes over 7,000 citations that make use of ANES data or questions. If you've published a paper or presented at a conference, please let us know! This promotes your work while helping the user community and demonstrating the importance of funding the project.

Home - ANES | American National Election Studies
The out-party feeling-thermometer ratings in 2016 (25.99) and 2012 (27.31) are noticeably lower than those recorded in 1988 (45.54). Interestingly, the 2016 campaign—arguably the most divisive in recent history—resulted not only in increased hostility for the out-party, but at least in the case of the Democrats, also in less enthusiasm for the in-party.

(ANES), "feeling thermometers" have become standard tools in sur-vey-based political research. Respondents use feeling thermometers to locate attitude objects on an imaginary scale ranging from 0 (very cold) to 100 (very warm). There is mounting evidence that people respond to political objects in consistently positive or consistently negative ways

SOKIE LIKE IT HOT - JSTOR Home
In the study that examined the feeling thermometer questions from the 1972 American National Election Studies (ANES), Wilcox, Sigelman, and Cook (1989) find that respondents provide systematically different ratings to the feeling thermometers based not only on their actual evaluations of various social groups but also on other factors. For example, women, non-white, and less-educated respondents tend to systematically rate all social and political groups in the survey to be warmer than men ...

The Strengthening of Partisan Affect - Wiley Online Library
Supplementary analyses using ANES feeling thermometers show that inparty feeling thermometer ratings have decreased in recent years among weak and leaning partisans. As a result, the feeling thermometer results confirm the conclusion from the experiments.

Affective polarization or partisan disdain? Untangling a ...
The feeling thermometer is one of the longest continuous time series studies in which Americans are asked about their attitudes toward Jews, and there are items on the ANES surveys that can be used to partially correct for social desirability response effects. The analysis compares several demographic groups, an important focus of extant research.
