Magnetic minerals in rocks can lock-in a record of the direction and intensity of the magnetic field when they form. This record

CALCULATING. Pacific Ocean rate = 8 cm/yr. distance = 16 000 000 cm. North Atlantic Rate = 3.89 cm/yr. rate = 16 000 000/2 000 000 yr. = 8 cm/yr. = 3.89 cm/yr. - yes, because of paleomagnetism.

with respect to paleomagnetism. measure the distance that different ocean basins have opened. calculate the rate of seafloor spreading in different ocean basins based on magnetic polarity reversals. Students may think that the rocks on the ocean floor change their polarity every time Earth's polarity reverses. Remind

1. Wegener formed the theory of continental drift in 1912. What prevented research of the ocean floor, paleomagnetism, and earthquakes at that time? 2. If many different observations can all be explained by the same theory, does that make the theory true? Does it make the theory more likely? Explain your answer. 3.
