There are many cryptographic algorithms. These are three of the most common: - DES (Data Encryption Standard) is the most popular computer encryption algorithm. DES is a U.S. and international standard. It is a symmetric algorithm; the same key is used for encryption and decryption.

Applied Cryptography (   )

It even covers encryption algorithms from the former Soviet Union, including GOST.The magnificence of Applied Cryptography is that Schneier is able to take very complex, abstract ideas and express them in an extremely comprehensible manner. Applied Cryptography therefore lacks the dryness that plagues a lot of textbooks.
