Arduino Practical Programming For Beginners
The Arduino programming language is based on a very simple hardware programming language called processing, which is similar to the C language. After the sketch is written in the Arduino IDE, it should be uploaded on the Arduino board for execution. The first step in programming the Arduino board is downloading and installing the Arduino IDE.

Arduino programming for beginners - HackerEarth Blog
Programs in the Arduino language are called "sketches". An Arduino sketch is comprised of two main parts: the setup function and the loop function. setup() - the setup() function is automatically executed at the very beginning of an Arduino program. Inside this function you will initialize variables, pins, and any libraries that you might be using in your sketch.

FREE EBOOK (PDF) – Ultimate Beginners Guide To Arduino What Is Arduino? Arduino is an open source programmable circuit board that can be integrated into a wide variety of makerspace projects both simple and complex. This board contains a microcontroller which is able to be programmed to sense and control objects in the physical world. By responding to sensors and inputs, the Arduino is able to interact with a large array of outputs such as LEDs, motors and displays.
