The third and fourth instructions say that, at any moment the automaton may move from state p to state q .

The fifth instruction says that in state q , for each symbol 1 read, one A is popped. Finally, the sixth instruction says that the machine may move from state q to accepting state r only when the stack

It is called a machine instruction because the assembler translates it into the machine language code that the computer can run.

Machine instructions are described in Machine instruction statements.
