Accounting Exercises: Teach-yourself accounting exercises

SOLUTIONS: a) and b): To get the answer for a) above, we simply use the basic accounting equation. ASSETS = OWNER'S EQUITY + LIABILITIES If we turn this around to make owner's equity the subject, then: OWNER'S EQUITY = ASSETS - LIABILITIES So we take the assets and minus the liabilities. In other words, \$760,000 - \$240,000 = \$520,000

Basic Accounting Exercises Solutions

Note that in most accounting questions you won't have to account for "Cash on hand" and "Bank" in separate accounts. In most questions I just combine these into "Bank." But in this question they specifically talk about opening the bank account with \$20,000 of the \$100,000, which indicates they kept cash on hand in addition to the bank account, which needs to be accounted for.

Journal Entries and Ledger Question and Answer

Show that the accounting equation is satisfied after taking into consideration each of the following transactions in the books of Mr. N . Started business with capital 1,00,000 ; Bought furniture 25,000 ; Bought goods for cash 20,000 ; Bought goods from Ram on Credit 5,000 ; Sold goods for cash for 15,000 ; Sold goods to Shyam on credit 8,000

Accounting Cycle Exercises I - Kenyatta University Library

Accounting is based on the principle of two-sided. In order to carry out business activities, the company needs funds; these funds must be given to the company by someone. The funds owned by the company are called assets. Part of these assets is provided by the owner, total amount of funds contributed by him is called owner's equity or capital. If the owner is the only one who contributed ...
