In consequence, beam leads are relatively little used, except in special applications such as beam lead microwave diodes. Unpackaged beam lead diodes have extremely low parasitic capacitance and perform well at frequencies above 10GHz, as well as giving improved performance over their packaged counterparts at lower frequencies.

IDC connectors are most commonly used with Flat Ribbon Cables to create a cable assembly. Ribbon cables consist of multiple wires connected together in a thin, flat ribbon. The IDC connector has sharp contact points which pierce the insulation and make contact with the wire. They are quick and easy as you do not need to strip shrouded wires like conventional crimping methods. IDCs are an ideal ...

In the IDC-based interconnection system, box-shaped dual-beam terminals reside on a continuous strip. The manufacturer inserts the terminals into a plastic cavity using either semi or fully automatic insertion equipment. The plastic cavity can be molded onto the customer's existing bobbin or can be part of a separately attached

housing.
