802.11b or 802.11g networks use the 2.5GHz carrier frequency while the newer 802.11n networks use the 5GHz frequency. Devices that support both frequencies (2.4 and 5Ghz)are known as dual band ,and are useful when transitioning from old wireless networks to the newer networks. Wi-Fi standards are backwards compatible so that if you buy a device that uses the latest Wi-Fi standard it will work on networks that only support an older standard.
