Biofluid Dynamics of Human Body Systems: Goyal, Megh R

. . .

Biofluid dynamics may be Page 28/46

considered as the discipline of biological engineering or biomedical engineering in which the fundamental principles of fluid dynamics are used to explain the mechanisms of biological flows and their Page 29/46

interrelationships with physiological processes, in health and in diseases/disorder. It can be considered as the conjuncture of mechanical engineering and biological engineering. It spans from Page 30/46

cells to organs, covering diverse aspects of the functionality of systemic physiol

Biofluid Dynamics of Human Body Systems: Goyal, Megh R Page 32/46

Biofluid mechanics focuses on macrocirculation, microcirculation, and specialty circulation that flows through kidney, lungs, eves, joints, diarthroses, and splanchnic circulation Page 33/46

that are important in human body. It is necessary to understand fluid dynamic factors such as velocity distribution, pressure, flow rate ratio, flow behavior, velocity gradients, and stress on the wall and on Page 34/46

blood cells to design medical device for recording and diagnosis purpose.

Biofluid Dynamics of Human Page 36/46

Body Systems by Megh R. Goyal ...

Abstract. In the field of fluid flow within the human body, blood flow in the systemic circulation has been the main focus since the recognition by William

Page 37/46

Harvey that blood was in fact in continuous circulation and carried by a network of blood vessels. But beyond the systemic circulation, other fluids and other fluid flow phenomena pervade the body Page 38/46

so totally that it would be hard to imagine a bodily function of any kind that does not involve fluids or fluid flow.
