EVO-2, IST-1 5.3 Mendelian Genetics 5.C Perform chi-square hypothesis testing. 6.E.c Predict the causes or effects of a change

Heredity
Gregor Mendel studied inheritance of traits in pea plants. He proposed a model where pairs of "heritable elements," or genes, specified traits. Genes come in different versions, or alleles. A dominant allele hides a recessive allele and determines the organism's appearance.

Activity 9.2 asks us to conduct an experiment to prove that the genotypic ratio in the f2 generation is 1:2:1. Answer: We cross each of the seeds obtained in the f2 generation with a pure recessive variety to confirm the genotypic ratio. Explanation: In Mendelian inheritance, we get a phenotypic ratio of 3:1 and genotypic ratio of 1:2:1.
