 Heredity Activity #1 page 2 Interphase: Place one strand of each color near the center of your work area. (Recall that chromosomes at this stage would exist as diffuse chromatin and not as visible structures.) DNA synthesis occurs during interphase and each chromosome, originally composed of one strand, is now made up of two strands, or chromatids.

 5.1 Meiosis 1.B Explain biological concepts and/or processes. 5.2 Meiosis and Genetic Diversity 3.A Identify or pose a testable question based on an observation, data, or a model. EVO-2, IST-1 5.3 Mendelian Genetics 5.C Perform chi-square hypothesis testing. 6.E.c Predict the causes or effects of a change

Heredity  
 Gregor Mendel studied inheritance of traits in pea plants. He proposed a model where pairs of "heritable elements," or genes, specified traits. Genes come in different versions, or alleles. A dominant allele hides a recessive allele and determines the organism's appearance.

 Activity 9.2 asks us to conduct an experiment to prove that the genotypic ratio in the f2 generation is 1:2:1. Answer: We cross each of the seeds obtained in the f2 generation with a pure recessive variety to confirm the genotypic ratio. Explanation: In Mendelian inheritance, we get a phenotypic ratio of 3:1 and genotypic ratio of 1:2:1.
