Probability Random Variables Solution
Paul Erdős asked if it was possible to assemble sets of "triples" —
three points on a graph — so that they abide by two seemingly
incompatible rules. A new proof shows it can always be done.

Hypergraphs Reveal Solution to 50-Year-Old Problem
In our formulation, the BLEs are linearised around a two-dimensional
and steady ... Zeroing the boundary terms also supplies the boundary
conditions for the adjoint LBLE variables. The first three ...
