Blood Typing: Purpose, Procedure & Risks - Healthline

Depending on the results of your blood typing, your blood will be classified as type A, B, AB, or O. It will also be classified as Rh+ or Rh-. There is no "normal" or "abnormal" blood type.

Blood Typing and Crossmatching - Healthline

Blood typing is a laboratory test used to determine an individual's blood type. Some people are surprised to learn that even with typing, incompatibilities can still occur. This is because full testing for every known blood group is generally not performed, because it is expensive and time consuming.

What is Blood Typing? (with pictures) - wiseGEEK

There are four major blood groups determined by the presence or absence of two antigens – A and B – on the surface of red blood cells. In addition to the A and B antigens, there is a protein called the Rh factor, which can be either present (+) or absent (–), creating the 8 most common blood types (A+, A–, B+, B–, O+, O–, AB+, AB–).
