This diagram shows a typical street rod brake system. A 2 PSI residual pressure valve (RPV) is needed in the disc brake circuit, and a 10 PSI RPV is required in the drum brake circuit as well as an adjustable proportioning valve (APV). This diagram illustrates the 2 most common types of fittings used in street rod brake systems. The first is the inverted flare type, which is used by most domestic production cars and trucks, and on the bottom is the -3 AN (which is pronounced as dash three A...)

BRAKE SYSTEM DIAGRAM Tapered Wear A gradual slope of the pad material creating uneven thickness on either end of the pad. Often caused by:

- Worn rubber caliper bushings
- Worn caliper slide rails
- Improper lubrication

More Pad Less Pad Uneven Wear One side of the pad set has significantly less unused friction material than the other.

Thus left the side of the servo cylinder piston is exposed to atmosphere and vacuum acts on the right side, which causes the braking effort.. Braking takes place by suction from the engine inlet manifold. **Air Brake:** This type of air brake system is commonly used in heavy vehicles such as buses, trucks, etc.. In this also when the brake pedal is pressed, air to atmosphere enters the compressor ...

Brake System Diagram - Street Rod - Speedway Motors In the classic mechanical brake system, there was a cable which connected the brake pedal and brake shoe assembly together. When the driver stepped on the brake pedal, it pulled on the cable and allowed the brake drum spinning to slow down. This was used on cars in the early 20th century, and...

Brake shoes are the curved, metal friction plates pressing against the inside of the brake drums to slow the wheels. While disc brake systems are more effective, drum brakes are cheap to manufacture (and therefore cheaper to replace).

Brakes Basics: The Components in the Braking System

Brakes on both trucks and cars work on the principle of friction. Both kinds of vehicles have brake drums, along with their pads and shoes, connected to the vehicles' wheel axes. Car brakes rely on the brake fluid that flows through the system to work properly. Thus, car brakes are a hydraulic system, relying on fluid. On the other hand, truck ..
