The BR Standard steam locomotives were an effort to standardize locomotives from the motley collection of older pre-grouping locos. Construction started in 1951. Due to the controversial British Railways' modernisation plan of 1955, where steam traction was abandoned in favour of diesel and electric traction, many of the locomotives' working lives were very short: between 7 and 17 years. Many have been preserved, mainly due to their having been sent to Barry.

The steam locomotives of British Railways were used by British Railways over the period 1948 — 1968. The vast majority of these were inherited from its four constituent companies, the "Big Four". In addition, BR built 2,537 steam locomotives in the period 1948 — 1960, 1,538 to pre-nationalisation designs and 999 to its own standard designs. These locomotives had short working lives, some as little as five years, because of the decision to end the use of steam traction by 1968, against a ...

The Standard class 6, otherwise known as the Clan Class, was a class of 4-6-2 Pacific tender steam locomotive designed by Robert Riddles for use by British Railways. Ten locomotives were constructed between 1951 and 1952, with a further 15 planned for construction. However, due to acute steel shortages in Britain, the order was continually postponed until it was finally cancelled on the publication of the 1955 Modernisation Plan for the re-equipment of British Railways. The Clan Class was based

The British Railways BR Standard Class 9F 2-10-0 is a class of steam locomotive designed for British Railways by Robert Riddles. The Class 9F was the last in a series of standardised locomotive classes designed for British Railways during the 1950s, and was intended for use on fast, heavy freight trains over long distances. It was one of the most powerful steam locomotive types ever built for British Railways, and successfully performed its intended duties.

4MT 75000 — 75079 4-6-0 BR Standard Class 4 These locomotives were designed for cross-country and secondary passenger work. They are a smaller version of the Standard class 5 73000 locomotives and as they are weigh lighter they had almost universal route availability over main and secondary routes throughout Britain.
