Christian Parkinson GRE Prep: Calculus I Practice Problem Solutions 3 so f is constant. Problem 11. Let $f(x) = x^2 + \sin(x)$ for $x > 0$. Find $f'(x)$. Solution. The temptation here is to use the power rule or the exponential rule but in the current form, neither apply since both the base and the exponent depend on x . To x this, we write $f(x) = e^{(2+\sin(x))} \log(e)$. Thus

One answer is that calculus is the mathematics of change. Another is that calculus is a field of mathematics with important applications in science, engineering, medicine, and business. The principle example in this lesson is the classic tangent line problem: the calculation of the slope of the tangent line to a parabola at a specific point.

From $x^2 + y^2 = 144$ it follows that $x \frac{dx}{dt} + y \frac{dy}{dt} = 0$. Thus when $x(t) = 4$ we have that $y(t) = 8$ and $4 + 8 \frac{dy}{dt} = 0$. The top of the ladder is falling at the rate $\frac{dy}{dt} = -\frac{1}{2}$ m/min. 3. Let $x = x(t)$ be the height of the rocket at time t and let $y = y(t)$ be the distance between the rocket and radar station.

Solving many types of calculus problems usually requires employing precalculus—algebra and trigonometry—to work out a solution. For this reason, Professor Edwards devotes the first few lectures to reviewing key topics in precalculus, then he covers some basic concepts such as limits and continuity before moving on to the two simple, yet brilliant ideas behind calculus—the derivative and the integral.
