Cell division
consists of two
phases— nuclear
division followed by
cytokinesis. Nuclear
division divides the
genetic material in

Read Free Cell Division Study

the nucleus, while cytokinesis divides the cytoplasm.

There are two kinds of nuclear division—mitosis and meiosis. Mitosis divides the nucleus so that both daughter cells are genetically identical.

Genetic material.

The mitotic phase includes mitosis and cytokinesis. •

Mitosis is a multi-step process in which the nucleus of the cell divides.

- Cytokinesis, which comes after mitosis, is the division of the cytoplasm to create two daughter cells.
