For example, chemistry studies properties, structures, and reactions of matter (chemistry's focus on the molecular and atomic scale distinguishes it from physics). Structures are formed because particles exert electrical forces on each other, properties include physical characteristics of given substances, and reactions are bound by laws of physics, like conservation of energy , mass, and charge.

Biodiesel has gained attention in recent years as a renewable and environmentally friendly fuel source. A laboratory experiment designed for high school students is described to study biodiesel production. Under optimum conditions, the time of running the reaction of biodiesel synthesis was less than a half-hour. Moreover, based on the difference in density and solubility of reactants and ...
