Pragmatic Considerations: The Civil Engineering major (116 units) provides a structured curriculum that ensures breadth across different areas specified by ABET. The Environmental Systems Engineering major (96 units) offers much more flexibility in choosing courses, and the ability to focus on a specific topic area.

Civil And Environmental Systems Engineering 1st Edition ...
The civil engineering profession is concerned with the built environment. Civil engineers plan, design, and construct major facilities, including highways, transit systems, airports, dams, water and wastewater treatment systems, tunnels, energy facilities, harbors, canals, buildings, and bridges. Civil engineers manage our air, water, and energy resources and protect society from natural catastrophes, such as earthquakes, and the hazards society itself generates in the form of toxic wastes.

These systems are at the core of Civil and Environmental Engineering of the 21st Century. The understanding of how such systems work requires knowledge about the constitutive laws that govern them, such as traffic flow, fluid mechanics, structural mechanics, and smart networks.

Professional Considerations: The Civil Engineering degree is ABET-accredited, while the Environmental Systems Engineering major is not. A degree accredited by ABET (Accreditation Board for Engineering and Technology) is a first step toward a professional engineering license.

The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st Century involving natural and built environments, in consulting and industry as well as in graduate school.

The Civil and Environmental Systems minor is brand new for 2016-2017 and is unique because it combines principles and knowledge from across civil, environmental and systems engineering into a hyper-concentrated study focused on both the built and natural worlds. The Minor in Civil and Environmental Systems consists of the following subjects:
