Following are rules to be followed while coding a COBOL-DB2 program ? All the SQL statements must be delimited between EXEC SQL and ENDEXEC.. SQL statements must be coded in Area B. All the tables that are used in a program must be declared in the WorkingStorage Section. This is done by using the INCLUDE statement.

COBOL DB2 Program from scratch - step by step guide This post is just to help/guide to a new programmer in writing a cobol db2 program from scratch. Let us write a cobol program to read the EMPLOYEE table and get the details of the employee with name 'RYAN'. I am assuming the table is already created in the user database like below..

The definition of this PRIMARY KEY is not complete until you define the UNIQUE INDEX on it.So you must create unique index on this PRIMARY KEY which is the only way DB2 ensures that your PRIMARY KEY will not contain any duplicate values. Creating Unique index is very simple just add the word UNIQUE to normal CREATE INDEX definition.
