ABSTRACT. A community forestry approach was adopted by Cameroon as a strategy to promote the sustainable management of forests, participation by local communities in forest management, and poverty alleviation. However, results have been moderate and community forestry has largely failed in achieving its initial goals.

The management of forests with or by local communities is an important mechanism for addressing social equity while pursuing the sustainability of the forest resource. Community forestry is an umbrella term encompassing collaborative forest management and smallholder forestry. In the collaborative form, forestry is practised on lands with some form of communal tenure and involves collective action.

This paper analyses the contributions of community and smallholder forestry (CSF) to achieving the sustainable development goals (SDGs). A CSF-SDG positive feedback model is proposed: a model that holds that successful CSF positively contributes to 13 SDGs and 31 SDG targets. Recent CSF meta-studies have scrutinized factors leading to CSF success and found some 10 factors and conditions that contribute to that objective.

Forestry has proven an attractive alternative asset for long-term investors, as it provides the opportunity to benefit from the value of a naturally growing commodity and the security of ownership of the underlying land.

[Forestry | Gresham House | Alternative asset management](#)

Community forest is an evolving branch of forestry whereby the local community plays a significant role in forest management and land use decision making by themselves in the facilitating support of government as well as change agents. It involves the participation and collaboration of various stakeholders including community, government and non-governmental organisations. The level of involvement of each of these groups is dependent on the specific community forest project, the management syste
