Composite drawing uses descriptions given by witnesses to create a drawing that is a useful tool for identifying or eliminating a suspect. A composite drawing is not intended to be a portrait of an individual, but more of a two-dimensional likeness that is a visual record of the witness' recollections. Creating a composite drawing requires skill that goes beyond the technical.

Standards of how to define parts made out of composite material on engineering drawings is also presented. Standards are used to embody generally accepted 'best practice' in composite design within several industries. To be able to visualize the different stages in the working method, a model of a ring-strut-ring configuration have been used.

An engineering drawing is a type of technical drawing that is used to convey information about an object. A common use is to specify the geometry necessary for the construction of a component and is called a detail drawing. Usually, a number of drawings are necessary to completely specify even a simple component.
