Control System Migration. Many control systems are entering the obsolescence phase of their lifecycle. Newer control systems are available from all of the major control system vendors. The migration from the older hardware, software and communication platforms to the newer state of the art equipment can vary in the effort and expertise required to successfully handle the migration.

OVERVIEW: A 700 MW simple cycle power plant, utilizing 4 gas-peaking turbines wanted to upgrade their PLC system as part of a plant-wide upgrade. The PLC system consisted of 3 main processes: The main Balance of Plant (BOP) 90-70 PLC system, along with the remote Field Control I/O racks, a MODBUS 90-30 system, and a Sequential Events Recorder which also utilized a 90-30 rack. The plant ...

Reliable and effective control systems are a critical component of safe and profitable operations across process industries. And many of our industrial facilities today continue to operate using legacy control systems from the past four decades that are at or near the end of their lifecycles. Migration projects to modern control systems are complex, requiring detailed upfront planning, a methodical implementation strategy and astute project management.

Migration from your old control system to a new one is as inevitable as death and taxes. But unlike dying and paying taxes, you will be better off after a control system migration than before. That's the good news. The bad news is that the migration can sometimes be just as painful as paying taxes, if always a little better than death.
