Chapter 1 Basics of Heat Transfer 1-4 1-16 A 15 cm × 20 cm circuit board houses 120 closely spaced 0.12 W logic chips. The amount of heat dissipated in 10 h and the heat flux on the surface of the circuit board are to be determined. Assumptions 1 Heat transfer from the back surface of the board is negligible.2 Heat transfer from the front surface is uniform.

Heat Transfer ; 2nd Edition - catatanabimanyu
What is Convection. In general, convection is either the mass transfer or the heat transfer due to bulk movement of molecules within fluids such as gases and liquids. Although liquids and gases are generally not very good conductors of heat, they can transfer heat quite rapidly by convection.. Convection takes place through advection, diffusion or both. . Convection cannot take place in most ...

Example - Convective Heat Transfer. A fluid flows over a plane surface 1 m by 1 m. The surface temperature is 50 o C, the fluid temperature is 20 o C and the convective heat transfer coefficient is 2000 W/m 2o C. The convective heat transfer between the hotter surface and the colder air can be calculated as. q = (2000 W/(m 2o C)) ((1 m) (1 m ...
