Cushing's syndrome is a condition caused by having too much of a hormone called cortisol in your body. It can be serious if it's not treated. Who gets it and why Cushing's syndrome is uncommon.

[Cushing's syndrome – NHS](#)

Cushing's syndrome is caused by either excessive cortisol-like medication such as prednisone or a tumor that either produces or results in the production of excessive cortisol by the adrenal glands. Cases due to a pituitary adenoma are known as Cushing's disease, which is the second most common cause of Cushing's syndrome after medication.

[Cushing's syndrome – Wikipedia](#)

Cushing syndrome occurs when your body is exposed to high levels of the hormone cortisol for a long time. Cushing syndrome, sometimes called hypercortisolism, may be caused by the use of oral corticosteroid medication. The condition can also occur when your body makes too much cortisol on its own.

Cushing's syndrome or hypercortisolism, occurs due to abnormally high levels of the hormone cortisol. This can happen for a variety of reasons. In most cases, getting treatment can help you manage...

## ~~Cushing's Syndrome: Signs, Causes, and Treatment~~

Cushing's syndrome is a disorder that occurs when your body makes too much of the hormone cortisol over a long period of time. Cortisol is sometimes called the "stress hormone" because it helps your body respond to stress.

## ~~Cushing's Syndrome | NIDDK~~

Cushing's syndrome is caused by prolonged exposure to elevated levels of either endogenous or exogenous glucocorticoids. The degree of cortisol overproduction is very variable. When presentation is florid, diagnosis is usually straightforward.

## ~~Cushing's Syndrome. Symptoms and treatment of Cushing's ...~~

Cushing's syndrome is the name of a disorder that occurs when the body is exposed to an excess of steroids such as the hormone cortisol or similar synthetic versions. This can occur either because: the body produces too much cortisol hormone by itself (known as 'endogenous' Cushing's syndrome) or

## ~~Cushing's syndrome | You and Your Hormones from the ...~~

Cushing's syndrome can develop when your body makes too much of a hormone called cortisol (a main glucocorticoid). This condition was first described by a Dr Cushing who first wrote about it in the early 20th century. Cushing's syndrome, caused by the body making too much cortisol, is rare.

## ~~Cushing's Syndrome (Cushing's Disease) | Symptoms and...~~

Cushing's syndrome develops if your body makes too much cortisol hormone. Symptoms usually develop gradually and so the diagnosis may not be clear for some time. The condition is named after Harvey Cushing, an eminent American neurosurgeon, who described the first patients with this condition in 1912.

## ~~Cushing's Disease | The Pituitary Foundation~~

Cushing syndrome (also sometimes called Cushing's syndrome) is a disorder with physical and mental changes that result from having too much cortisol in the blood for a long period of time. Cortisol is a steroid hormone produced by the adrenal glands, located above the kidneys. In normal amounts, cortisol helps the body:

## ~~Cushing Syndrome | Hormone Health Network~~

Cushing's syndrome is a hormonal disorder caused by high levels of the hormone cortisol in your body. It's also known as hypercortisolism. Cortisol comes from your adrenal glands, which sit on top...

## ~~Cushing's Syndrome — WebMD~~

Cushing syndrome occurs when your body is exposed to high levels of the hormone cortisol for a long time. Cushing syndrome, sometimes called hypercortisolism, may be caused by the use of oral corticosteroid medication. The condition can also occur when your body makes too much cortisol on its own.

## ~~Cushing syndrome Disease Reference Guide - Drugs.com~~

Cushing syndrome can be difficult to diagnose, particularly endogenous Cushing syndrome, because other conditions share the same signs and symptoms. Diagnosing Cushing syndrome can be a long and extensive process. You may not have any firm answers about your condition until you've had a series of medical appointments.

## ~~Cushing syndrome - Diagnosis and treatment - Mayo Clinic~~

Cushing's disease is a condition caused by high levels of steroid in the body, normally produced in precise amounts by the adrenal glands. Cushing's disease causes a wide range of symptoms, such as excessive drinking and weeing, bald patches and a pot-belly. Treatment for Cushing's involves daily medication to reduce steroid production.

## ~~Cushing's Disease in dogs - PDSA~~

Cushing syndrome, or hypercortisolism, is an endocrine disorder that is most often caused iatrogenically by the exogenous administration of glucocorticoids. Less commonly, Cushing syndrome can result from endogenous overproduction of cortisol.

## ~~Cushing syndrome - Knowledge for medical students and ...~~

Cushing's syndrome describes a cluster of symptoms caused by the effect of excessive steroid hormones, known as glucocorticoids, upon the body. The production of glucocorticoids, in the form of the...
