Understanding DAX query plans is a long process. We start with very simple queries and only when these basic concepts are clear enough, we will dive into the complexity of DAX expressions. Our first query is amazingly simple and it runs on the Contoso database: EVALUATE ROW ("Sales", SUM (OnlineSales[SalesAmount]))

DAX Query Plans – SQLBI
Events in Progress analyzes a non-trivial query and illustrates the differences in query plans of more optimized DAX versions of the same query; The goal of the paper is to introduce the reading of a query plan. A more detailed analysis of each operation in the query plan will be the topic of a future paper.
