Are you writing print( ) statements to debug your Python ...
Conclusion. Debugging is an important step of any software development project. The logging module is part of the standard Python library, provides tracking for events that occur while software runs, and can output these events to a separate log file to allow you to keep track of what occurs while your code runs.

Using the logging Module to Debug Python Code | DigitalOcean
In order to debug a program in Python shell. We need to import the module pdb as well as the script to be debugged. import pdb import <file name> as m pdb.run('m.main()') Output: > <string>(1)<module>() -> None (Pdb) Python debugger uses the prompt (Pdb) to indicate that the program is executing in the debugging mode.

Debugging in Python using Built-in Method pdb - CodeSpeedy
Debugging code in a single Python file is as simple as starting the debugger using F5. You use F10 and F11 to step over and into functions respectively, and Shift + F5 to exit the debugger. Breakpoints are set using F9 , or using the mouse by clicking in the left margin in the editor window.

Python Development in Visual Studio Code – Real Python
Python's standard library has a queue module which, in turn, has a Queue class. Let's change the Pipeline to use a Queue instead of just a variable protected by a Lock. You'll also use a different way to stop the worker threads by using a different primitive from Python threading, an Event. Let's start with the Event.

An Intro to Threading in Python – Real Python
