Density is the relationship of the mass of an object to its volume. Density is usually reported in units of grams per cubic centimeter (g/cm³). For example, water has a density of 1.00 g/cm³ . Since a cubic centimeter contains the same volume as a milliliter, in some cases you may see density expressed as g/mL.

Density is the relationship of the mass of an object to its volume. Density is usually reported in units of grams per cubic centimeter (g/cm³). For example, water has a density of 1.00 g/cm³. Since a cubic centimeter contains the same volume as a milliliter, in some cases you may see density expressed as g/mL. Density = volume mass or D = V M

Name Per: Date: Density Worksheet

Name Per: Date: Density Worksheet Chemistry in Context 2008-9 Perhaps someone has tried to trick you with this question: "Which is heavier, a pound of lead or a pound of feathers?" Many people would instinctively answer "lead." When they give this incorrect answer, these people are really thinking of density. If a piece of lead and a feather of the same volume are weighed, the lead ...
