The aim of this work was to investigate volatile organic compounds (VOCs) emanating from urine samples to determine whether they can be used to classify samples into those from prostate cancer and non-cancer groups.

Urinary Volatile Organic Compounds for the Detection of ...

Volatile organic compounds (VOCs) are a wide range of carbon based (organic) chemicals (compounds) found in various man-made and naturally occurring solids and liquids. They evaporate easily at ordinary room temperature which is why they are termed volatile. Why measure VOCs? Some VOCs are harmful to human health and can cause environmental damage.
