Abstract :- Design and hardware implementation of a digital wattmeter has been presented in this paper. IC ADE7751, Microcontroller ATMEGA32 and a 16x2 LCD display are the major building blocks of the design. The real power information conveyed by the output signal from ADE7751 is extracted by necessary calibration

Design and Hardware Implementation of a Digital Wattmeter

more. The RF modulation at the sensors is digitized, and can be analyzed real-time with digital scope and spectrum analyzer software provided. The measurement will be displayed in Watt on a 2×16 Char display.

digital rf wattmeter

All information is displayed on a 2-line 16-character high-contrast backlit LCD display. The MFJ-828 also includes a big lighted cross-needle SWR/wattmeter. The MFJ-828 enters a sleep mode when idle and when no transmit signal is present, turning off the microprocessor clock to avoid the generation of spurious signals.

WaveNode products fill the gap between Laboratory R.F. instruments and simple “Digital Watt meter” • Simultaneous monitoring of RF power/SWR on two or four separate coax sensors. • Calculates SWR, peak, and average power for display on the built-in LCD display. Bargraph displays of peak power are shown when the RF power exceeds 2 watts.
