Dimethyl sulfoxide is an organosulfur compound with the formula $(\text{CH}_3)_2\text{SO}$. This colorless liquid is an important polar aprotic solvent that dissolves both polar and nonpolar compounds and is miscible in a wide range of organic solvents as well as water. It has a relatively high boiling point. DMSO has the unusual property that many individuals perceive a garlic-like taste in the mouth after contact with the skin. In terms of chemical structure, the molecule has idealized C_s symmetry. It has a tri

~~Dimethyl sulfoxide—Wikipedia~~

DMSO is an odorless, non toxic crystalline compound, & is used in the cosmetic & pharmaceutical industry for its trans dermal qualities. What this means is the Dimethyl Sulfoxide compound facilitates deeper penetration of any given substance either through the skin or within bodyily tissues. DMSO has also been used by itself for therapeutic effect & detoxifying qualities.

~~DMSO—Dimethyl Sulfoxide: A Potent Trans Dermal Compound~~

Dimethyl sulfoxide has been tested in various experimental injuries of the central nervous system in relation to other therapies. It appears to be a useful drug in acute extradural mass-forming lesions, middle cerebral artery occlusion, respiratory anoxia, and spinal cord injuries, in rhesus and squirrel monkeys, dogs, and rats.
