Many people diagnosed with a substance use disorder (SUD) also suffer from a co-occurring mental health or behavioral disorder. This is known as a dual diagnosis.

Individuals with a dual diagnosis require an integrated treatment plan that addresses both disorders as interconnected mental health issues. According to the National Survey on Drug Use and Health (NSDUH), 45 percent of people with addiction have a co-occurring mental health disorder.

## Dual Diagnosis: Mental Health and Addiction – Addiction Center

A dual diagnosis of co-occurring drug addiction and psychological trauma can be challenging. The most effective kind of treatment for this combined condition is care that is specifically designed to target both psychological trauma as well as drug addiction. This kind of treatment might involve psychotherapy and medication.

## ~~Difference Between Abuse and Addiction | Dual Diagnosis~~

A Dual Diagnosis can be made up of any combination of a mental disorder (anxiety, depression, bipolar disorder) and addiction (drugs, alcohol, sex, gambling). Dual Diagnoses that include depressive disorders are among the most common forms of the problem; in fact, the Journal of Clinical Psychiatry reports that one in three adults who struggle with alcohol or drug abuse also suffers from depression.

Dual Diagnosis is a term used to describe cases in which a person has problems with drug or alcohol abuse in addition to a separate diagnosis of mental illness such as anxiety, depression, or PTSD. Studies have shown that up to half of patients with mood disorders use drugs or alcohol to cope with symptoms of their illnesses.
