Mountain Formation. Thrust and reverse
fault movement are an important
component of mountain formation.
Mountain formation refers to the
geological processes that underlie the
formation of mountains. These processes
are associated with large-scale movements

of the earth's crust (plate tectonics).

Mountain formation is related to plate tectonics. Folding, faulting, volcanic activity, igneous intrusion and metamorphism are all parts of the orogenic process of mountain building.

Taconic orogeny, first of three mountain-building events forming the Appalachian Mountains in eastern North America, the Acadian and Alleghenian orogenies being the second and third events, respectively. Originally viewed as a single event, the Taconic orogeny is now known to consist of at least three episodes. The first took place in the Early Ordovician Epoch near Maine and Newfoundland.
