Evolutionary economics is part of mainstream economics as well as a heterodox school of economic thought that is inspired by evolutionary biology. Much like mainstream economics, it stresses complex interdependencies, competition, growth, structural change, and resource constraints but differs in the approaches which are used to analyze these phenomena. Evolutionary economics deals with the study of processes that transform economy for firms, institutions, industries, employment, production, tra

Evolutionary economics - Wikipedia

Economic growth spread to all regions of the world during the twentieth century, when world GDP per capita quintupled. The highest growth occurred in the 1960s during post-war reconstruction. Some increase in the volume of international trade is due to the reclassification of within-country trade to international trade – because of increasing number of countries and resulting changes in national boundaries.

Economic history of the world - Wikipedia

In 1958 American economists Alfred H. Conrad (1924–1970) and John R. Meyer (1927–2009) founded New Economic History, which in 1960 was called Cliometrics by American economist Stanley Reiter (1925–2014) after Clio, the muse of history. It uses neoclassical economic theory to reinterpret historical data, spreading throughout academia, causing economic historians untrained in economics to disappear from history departments.

Economic thought has developed over time in a historical context. It can be argued that Economics has always been a philosophy rather than a Science. This is clearly evident from Greek, Chinese and Indian Economic thought. However, in the latter part of the 19th century Mathematics became the dominating force in Economics.
