Electromagnetic compatibility is the ability of electrical equipment and systems to function acceptably in their electromagnetic environment, by limiting the unintentional generation, propagation and reception of electromagnetic energy which may cause unwanted effects such as electromagnetic interference or even physical damage in operational equipment. The goal of EMC is the correct operation of different equipment in a

*Electromagnetic compatibility - Wikipedia*

Electromagnetic compatibility (EMC) describes the ability of any electrical or electronic system, machine, appliance etc. to operate without malfunction in a disturbing electromagnetic environment while not itself disturbing the operation of other components of the system.

Electromagnetic compatibility (EMC) can be achieved by evaluating the electromagnetic environment (often characterized by standards or requirements) to which equipmentsystems is exposed and then designing and building equipmentsystems to function correctly in the operational environment without itself creating EMI.
