How Are Electronic Health Records Implemented ...
Electronic health records can help with

productivity if templates are used judiciously. As noted, they allow for point and click histories and physical exams that in some cases may save time. Embedded clinical decision support is one of the newest features of a comprehensive EHR.

Benefits of Switching to an Electronic Health Record (EHR ...

The Electronic Health
Record (EHR) is a
longitudinal electronic
record of patient health
information generated
by one or more
encounters in any care
delivery setting.
Included in this
information are patient
demographics, progress
notes, problems,
medications, vital signs,
past medical history,

immunizations, laboratory data and radiology reports.

Records: A Practical ...*
EHRs are real-time,

patient-centered records that make information available instantly and securely to authorized users. While an EHR does contain the medical and treatment histories of patients, an EHR system is built to go beyond standard clinical data collected in a provider's office and can be inclusive of a broader view of a

patient's care.

What is an electronic health record (EHR)? | HealthIT.gov

Concise, direct, but above all honest in recognizing the challenges in choosing and implementing an electronic health record in primary care, Electronic Medical Records: A Practical

Guide for Primary Care has been written with the busy primary care physician in mind.

Handbook for Electronic Health

Records Implementation

A more general and contemporary term is "Electronic Health Records" (EHRs), which expands the scope of systems to include data relevant to both health and disease, and expands the sources of data beyond the records created by health professionals, to include the patient's

own observations, and family history data generated by relatives.

health records ...

An electronic health record (EHR) is software that's used to securely document, store, retrieve, share, and analyze information about individual patient care. EHRs are hosted on computers either

locally (in the practice office) or remotely. Remote EHR systems are described as "cloud-based" or "internet-based."
