Elementary Differential
Equations, 10th Edition is
written from the viewpoint
of the applied
mathematician, whose
interest in differential
equations

equations may sometimes be quite theoretical and sometimes intensely practical. The authors have sought to combine a sound and accurate exposition of the elementary theory of differential equations with

considerable material on methods of solution, analysis ...

...

Elementary Differential Equations, 10th edition is

written from the viewpoint of the applied mathematician, whose interest in differential equations may sometimes be quite theoretical, sometimes intensely practical, and often somewhere in between.

The book is written primarily for undergraduate students of mathematics, science, or engineering, who typically take a course on differential equations during their first or second year of study.

WebAssign - Elementary Differential Equations 10th edition

The rate at which the chemical flows in is given by rate in $=(5 \times 106)$gal/yr$(2 +\sin 2t)$g/gal. (18) The

concentration of chemical in the pond is $Q(t)/10^7$g/gal, so the rate of flow out is rate out $=(5 \times 10^6)$gal/yr$[Q(t)/10^7]$g/gal$= Q(t)/2$g/yr. (19) Thus we obtain the differential equation $dQ\ dt =(5 \times 10^6)(2$

$+\sin 2t) - Q(t)$ 2.

This textbook combines an exposition of the elementary theory of differential equations with methods of

solution, analysis, and approximation. In the seventh edition, mathematical modeling, the ideas of stability and instability, and numerical approximations via Euler's method appear much earlier

than in previous editions.
