The green, red, yellow and blue spheres represent atoms of carbon, oxygen, sulfur and nitrogen, respectively. The white spheres represent hydrogen, which were determined mathematically rather than by the X-ray analysis. The first structure of an organic compound, hexamethylenetetramine, was solved in 1923.

X-ray crystallography - Wikipedia

The second edition of Cullity's text is a classic. It was an extremely useful book for experimentalists who have to use x-ray diffraction to study solid state materials. It did not have a lot of theory, but gave very clear explanations of the concepts and methods needed to apply this powerful characterization technique.
