Enthalpy-Entropy (Mollier) Diagram for Steam (MEEEMDS) An enthalpy-entropy chart, also known as the h-s chart or Mollier diagram, plots the total heat against entropy, describing the enthalpy of a thermodynamic system. The diagram was created in 1904, when Richard Mollier plotted the total heat against entropy.

The Mollier diagram also known as the enthalpy-entropy diagram shows graphically the various properties of steam ranging from superheated steam to the mixed region. The diagram does not provide water (liquid) properties. A sample of the diagram is shown below in order to illustrate the main points of the diagram and how to use the diagram.

The Mollier enthalpy-entropy diagram for water and steam. The "dryness fraction", x , gives the fraction by mass of gaseous water in the wet region, the remainder being droplets of liquid. An enthalpy-entropy chart, also known as the $H - S$ chart or Mollier diagram, plots the total heat against entropy, [1] describing the enthalpy of a thermodynamic system. [2]

Pressure-Enthalpy diagram The Pressure-Enthalpy diagram below is an alternative representation of the Steam Tables, where the axes are Pressure (Vertical) and Enthalpy (Horizontal) and with curves representing temperature (T), entropy (s), specific volume (v), and dryness fraction (x).

A $T-s$ diagram can be constructed for any pure substance. It exhibits the same features as $P-u$ diagrams. Temperature Entropy ($T-s$) Diagram. In the liquid-vapor region in Figure 13, water and steam exist together. For example, at point A, water with an entropy (s_f) given by point B, exists together with steam with an entropy (s_g) given by point C. The quality of the mixture at any point in the liquid-vapor region can be found using the following relationship.

To follow these different types of processes, a new diagram can be drawn complete with pressures and temperatures, showing entropy on the horizontal axis, and enthalpy on the vertical axis, and is called an enthalpy - entropy diagram, or $H - S$ diagram, Figure 2.15.5.

The Enthalpy-Entropy or $h-s$ diagram: The $h-s$ diagram is one in which Enthalpy values form the vertical axis and Entropy the horizontal axis. The values of the other related properties may be superimposed in the form of supplementary curves. In the diagram below: green lines show steam temperature; blue lines give (absolute) steam pressure; and

Steam is water in the gas phase. It is commonly formed by boiling or evaporating water. Steam that is saturated or superheated is invisible; however, "steam" often refers to wet steam, the visible mist or aerosol of water droplets formed as water vapour condenses.. The enthalpy of vaporization is the energy required to turn water into the gaseous form when it increases in volume by 1,700 times ...

Steam - Wikipedia

Enthalpy Entropy ($h-s$) or Mollier Diagram The Mollier diagram, shown in Figure A-1, is a chart on which enthalpy (h) versus entropy (s) is plotted. It is sometimes known as the $h-s$ diagram and has an entirely different shape from the $T-s$ diagrams.

Enthalpy-Entropy Diagram (Interactive Simulation) - YouTube

His enthalpy-entropy diagram for steam was first published in 1904. He continued his work to update his thermodynamic diagrams and steam tables to account for new technical developments. Professor Mollier was active in the area of the gasification and combustion processes as related to steam engines, combustion engines and refrigeration plants.
