Family health is a state in which the family is a resource for the day-to-day living and health of its members. A family provides its individual members with key resources for healthful living, including food, clothing, shelter, a sense of self-worth, and access to medical care. Further, family health is a socioeconomic process whereby the health of family members is mentioned.

J. Weiss, in International Encyclopedia of the Social & Behavioral Sciences, 2001. The very diversified topic of family health is currently receiving increasing attention from different disciplines and different directions within psychology. This is especially evident in the areas of clinical and family psychology, gender-specific research, and health psychology.
