A creep-feed mixture of high-fiber co-product feeds such as corn gluten, dry distiller's grains, and soyhulls can be combined with a salt-vitamin-mineral mix to provide a palatable ration for the calves. The mixture should be rather large particles to prevent dustiness. A commercial 14%–16% protein creep feed may be used as an alternative.

The dietitian should be referred to provide recommendations regarding an appropriate feeding regimen. Feed Type. Through feeding directly into the jejunum, feed enters the intestine distal to the site of release of pancreatic enzymes and bile. (2) Whole protein feeds may be well tolerated and should be standard practice.

~~Clinical Guidelines (Nursing) : Jejunal Feeding Guideline~~

The World Health Organization (WHO) recommends exclusive breastfeeding until an infant is at least 6 months of age, with the introduction of solid food around this time. Benefits to the infant include a reduction in the incidence and severity of infections, asthma, and atopic eczema.
