The basic theory, as always, is this: Pick the open string and verify it ' s in tune. Fret at the 12th fret and pick this note. Compare it to the open string—is it flat or sharp? If the 12th fret note is flat, move the saddle forward a little using a flat or philips screwdriver as appropriate. If the ...

First, setup all other factors of the guitar (intonation, action, neck curve) before setting up the tremolo (see the setup tips and the troubleshoot-list if unsure). Then tune the guitar to pitch. With the screwdriver, turn the adjustment screw so that you just cannot engage the tremlock (by sliding the tremlock button towards the tremolo, away from the bridge).
